Despite the fact that the new employee was highly qualified and had impressive credentials, her abrasive personality ultimately caused significant tension and conflict within the workplace.

PSG Parse:

Dependency Parse:

SRL Parse:

> Predicate: caused
> ARGM-ADV: "Despite the fact that the new employee was highly qualified and had impressive credentials", "ultimately"
> ARG0: her abrasive personality
> ARG1: significant tension and conflict within the workplace

Given the sentence that was chosen, clearly the SRL Parse seems to be the weakest in terms of results. This is clearly due to the fact that it seems to least be able to identify what is happening within the sentence and its multiple parts. On the other hand, the dependency parse seems to have the best results as the tree itself has the most details and conveys a significant amount of information.
